Parkinson's Disease And Multiple Sclerosis Don't Actually Exist

Synopsis

This book explains how the symptoms of Parkinson's disease are exactly the same as the symptoms of multiple sclerosis and that all these symptoms are caused by: (1) ongoing life stress provoking: (2) the muscles of the neck, shoulders and chest to become excessively tense which (3) pulls the skeletal frame out of alignment and pinches nerves that go to the symptom-affected areas. This is only how they begin and if you start working to overcome these causal problems within the first year of symptom development, you won't have any real difficulty reaching remission. My explanations show that the only way Parkinson's disease and multiple sclerosis can be treated successfully is to find all the causal breakdown factors and overcome them. The longer a patient suffers from his/her symptoms, the more those three original causal problems encourage additional causal problems to develop, which makes it more difficult to reach remission. In the medical documents I supply in this book you will learn that Parkinson's disease is "NOT" caused by substantia nigra atrophy, and MS is "NOT" caused by myelin degeneration and that these two disease names were created by Dr. Jean Charcot in the 1880's to help pharmaceutical leaders sell more drugs. This book supplies you with photo images of medical journal reports, medical book reports and testimonies of patients, photos of the spine of Parkinson and MS patients, autopsy findings and findings in medical history relating to Parkinson's disease and MS, that go as far back as to the days of Dr. Claudius Galen. All these documents and discoveries confirm that these two diseases are fake diseases invented by Dr. Charcot along with pharmaceutical company leaders to sell drugs that do nothing more than relax the muscular system a little, so patients feel just enough improvement that they get hooked, but they never get better. All this means is that, Parkinson's disease and multiple sclerosis are "NOT" incurable. You "CAN" overcome them but not if you follow medical advice. To prove my point I supply URL links that you can use to watch "before" and "after" success videos of PD and MS patients who I treated based on the causes I explain in this book, many who reached remission in a matter of only five to ten days. I also have URL's that will allow you to watch an explanation video of X-rays of a variety of PD and MS patients who show varying degrees of spinal curvature and degeneration, the more years they experienced their symptoms. (This video is explained in layman's terms so it is very easy to understand.) You will also see a video on how I can sometimes stop tremors in patients, "IN SECONDS", by temporarily activating the suppressed nerves that are causing the tremors, thus proving beyond any doubt that the cause of tremors is suppressed nerves just as I explained previously. In several videos on my website you will see several wheelchair-bound PD and MS patients walk away from their wheelchairs in a matter of days simply because I am overcoming the "REAL" causes and not trying to overcome the false

medical causes. You "CAN" overcome these disorders but not if you listen to medical advice!
