# The Critical Thinking Mind Benders Book 5 School Workbook

## Customer Reviews

We use this for homeschool. This is the third book we've used thus far in the series. Though I would not bank your child's entire logic education on it, this series has been fun (and challenging). My third grader has decided this book (7-12) is too hard for her! But admittedly in this volume the puzzles are considerably larger and tougher; the earlier volumes were just right for my children, starting out. I wish there were more volumes at graduated levels, so that they did not advance so quickly, and if there were, we'd have bought and used those along the way. I hope the author will create more books, broken down further into, perhaps, 2-year levels.

very good , I like this and I am adult with learning disabilities and find this very helpful, though pretty tough. after I purchased this I found that It was too difficult for me and I had to begin with a level 4 instead. so, on a hunch I purchased level 4 and i am half way through with it. will be beginning level 5 in time for thanksgiving. this really helped with my self confidence and the book was in very good condition.thanks.G

I loved solving the problems in books 3 & 4, but the first problem in book 5 didn't work out correctly. Keep in mind that the teaching suggestions at the beginning of the book explicitly state "don't look for tricky, misleading situations." Therefore, logically, the following two statements don't correlate: According to the answer key, (spoiler alert): Vince is the computer programmer. Yet clue #2 states: Vince never had any education past the ninth grade. It is a rare 9th grade student who has achieved the necessary training to become a career computer programmer. If someone reads the problem differently, please explain it to me. I just hope there are no more inconsistencies in the book, I'm addicted to solving these things.

Kids found it challenging and fun. I had a great time with them too.

My daughter (going into 7th grade) can't put it down.

I bought this book 5 for my 8th grader since she loved the book 3 and 4. It's been a while since she practiced, but she got right back into this book 5. I believe kids need to practice "thinking skills" in this kind of form and we'll continue to go to the next book as long as they are available. Now my son uses the book 3 and my husband can't keep away from the problems while we work on. They are very interesting and fun.

Well, it can be fun but you have to work at it. The initial mind benders are simplistic but become increasingly complicated. Thankfully there's an Answer Key at the end of the workbook!

Great logic puzzle solving techniques
